

We help people see and understand data.

“A system that allows users to create stunning graphs interactively and easily from large multidimensional datasets.”

– Jim Gray, Turing Award winner, about Tableau

A Home for Innovation: From VizQL to Hyper

VizQL is a visual query language that is the foundation of Tableau’s query generation. It can speak to all major database systems as well as Tableau’s blazingly fast data engine Hyper.

Tableau Acquires Hyper

In March 2016, Tableau acquired Hyper, a high-performance database system that started as a research project at Technical University Munich and later spun out into a startup.

Key technical personnel that pioneered code generation for main-memory database systems and achieved breakthroughs in query optimization and hybrid transactional and analytical processing continues to innovate from Tableau’s offices in Seattle, Palo Alto, and our European research and development center in Munich.

We're Hiring!

Calling all technical talent – our Engineering team is hiring Software Engineers on both Development and Test teams as well as Research Engineers.
