## Welcome Message

### Welcome to 2019 ACM SIGMOD International Conference on the Management of Data!

This year, the conference is held in the city center of Amsterdam, capital of The Netherlands. Amsterdam is an internationally oriented city, home to people with origins from all over the world. This used to be already the case even back in the 16th and 17th century, when Amsterdam was the world's biggest trading and financial center; establishing the world's first stock exchange in 1602.

SIGMOD/PODS 2019 is held in the original Amsterdam Stock and Commodities Exchange, constructed by Dutch architect Berlage between 1896 and 1903, which now serves as the well-equipped Amsterdam Conference Center. This architect and his apprentices (the school of Berlage) left an important mark on the city, being responsible for a major expansion of the city in the early 20th century. The sculptures and drawings in the Exchange building refer to the people behind the commodities traded in the various rooms ("Effecten" - stock; "Graan" - grains), e.g., depicting farmers in the grain exchange room; as a reminder that trading affects society.

Amsterdam is a city that offers many cultural activities, including the world-famous classical Concertgebouw Orchestra, as well as many museums (Amsterdam Museum, Rijksmuseum, Rembrandthuis, Anne Frank Huis). In a slight break with SIGMOD tradition, the SIGMOD opening reception will be held one day later, on Tuesday night, when the SIGMOD/PODS attendees will have exclusive access to the Van Gogh museum. The Wednesday conference dinner

is organized across the water in Amsterdam North, in Norderlicht Cafe in a festival-like environment. This used to be harbour area and was less-populated and industrial, but in the recent decade has become a hotspot for nightlife activities.

Amsterdam is also increasingly a hub for data science companies and services, with multiple universities and CWI in the vicinity; which all participate in the organization of SIGMOD/PODS 2019. On Thursday night, after the SIGMOD program finishes, there will be a meetup of Amsterdam Data Science, where the local data science community will be able to mingle with our data management research community. The SIGMOD 2019 Research Program Committee consists of the Program Chair, two Program Vice Chairs, a core committee with 37 members, and a regular committee with 98 members. During the reviewing period, we solicited additional reviews from 16 external reviewers and occasional input from 10 assistant reviewers. The committee received 430 submissions, out of which 12 were desk-rejected (i.e., without review). There was no bidding; instead, reviewer assignments were made using input from Microsoft’s Conference Management System, the Toronto Paper Matching System, and the reviewers’ background (the detailed assignment procedure is described in a paper which has been submitted for publication to SIGMOD Record). The core committee members had (roughly) double the reviewing load of the regular committee members, and in addition acted as discussion leaders and meta-reviewers for their assigned papers. There were two rounds of submissions, with deadlines in July and November, respectively. Initially, each paper received three reviews. At this point authors could read the reviews and provide feedback about potential factual errors (disclosed to the reviewers) or sensitive issues about potential mishan-

dling (confidentially to the chair). Two additional reviews were solicited for a paper if (a) the reviewers' expertise level was suboptimal, or (b) if there was significant score discrepancy in the first three reviews, or (c) if it was heading for rejection but had received a weak accept (or higher) by at least one reviewer. Papers were discussed extensively online; 10 were accepted based on the first round of reviews, while 311 were rejected. The authors of the remaining 97 papers were asked to revise their papers to address reviewers' criticisms; 78 revisions were ultimately accepted for a total of 88 papers which are presented in the research track. Finally, 12 papers were shepherded after acceptance to guarantee that the camera-ready version addresses all of the reviewers' comments.

## **Conference Venue: Beurs van Berlage**

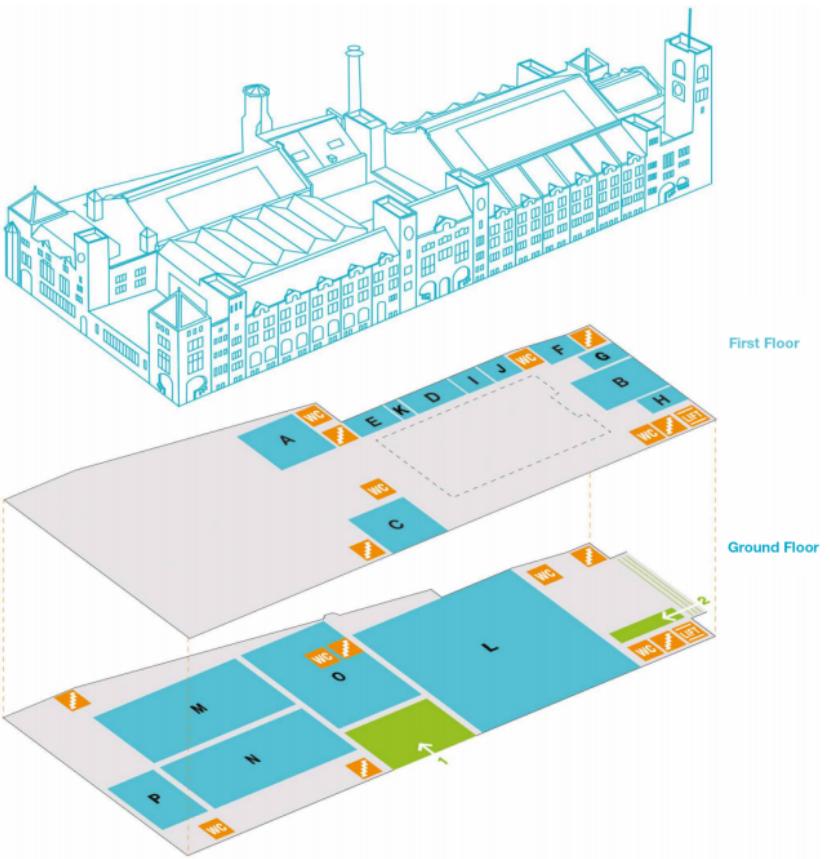

When you enter from the street (arrow in green, 1) and walk straight on, you will be in the Beursfoyer. To your right is the Grote Zaal ("zaal" stands for hall in Dutch; "kamer" stands for room). There, all breakfast, coffee breaks, lunches, afternoon demo/poster sessions as well as the PODS Reception on Sunday evening will be held. To your left are the Graanbeurszaal and the Effectenzaal. Both are large halls, of which the latter will be used for all plenary sessions. The other, smaller, rooms are upstairs.

## SIGMOD Reception - Van Gogh Museum

The Van Gogh Museum maintains the world's largest collection of the works of the world's most popular artist - Vincent van Gogh (1853-1890), his paintings, drawings and letters, completed with the art of his contemporaries. Each year, it receives 1.6 million visitors, making it one of the 25 most popular museums in the world.

SIGMOD/PODS'2019 is proud to offer all participants registered to the main conference exclusive access to the Van Gogh Museum for the SIGMOD opening reception; on Tuesday July 2, 2019, from 20:30 until 23:00. Your badge is our ticket into the museum, **you must bring it with you!**

We hereby like to thank **MonetDB** for sponsoring this event. There will be time to visit the museum; at the end of the walking route, back in the foyer, there will be drinks and snacks served. The reception food is intended to be dinner-replacing under moderate appetite.

Please note, again, the SIGMOD reception is on **Tuesday** evening (not Monday evening as usual in SIGMOD).

That day, the main program ends around 19:50; so participants have 40 minutes to get to the Museum, which is in the south center of Amsterdam (whereas the Beurs van Berlage conference center is in the middle of the center):

- Walking: 29 min (Instructions: [tiny.cc/m3kf7y](http://tiny.cc/m3kf7y))

Leave the venue taking a left and walk south to Dam square, and straight on into Rokin. Continue walking on Rokin until its end, at Munt tower. Continue into Muntplein which becomes Vijzelstraat until crossing the first main canal bridge, after which you take a right onto Herengracht. At the first opportunity you then go left into the Nieuwe Spiegelgracht. Continue this one straight, crossing no less than 4 canals (Prinsen, Keizers, Lijnbaans, Singel). The road passes under the Rijksmuseum; and continuing straight you will hit the Van Gogh museum.

- By metro: 19 min (Instructions: [tiny.cc/vmkf7y](http://tiny.cc/vmkf7y))

Leave the venue taking a left and walk south to Dam square, and straight on into Rokin. Earlier than indicated on the Google map, right after leaving Dam Square, there is a metro entrance, in front of Hudon's Bay. Metro 52 is Amsterdam's newest metro and its stations are quite beautiful. Take the metro in southward direction (Station Zuid) and exit at the very first stop (Vijzelgracht). Outside, take a right at the big roundabout into Weteringsschans. At the first main crossing, take a left onto the Museumbrug (bridge). The road passes under the Rijksmuseum; and continuing straight you will hit the Van Gogh museum.

- By Tram: 17 min (Instructions: [tiny.cc/fdkf7y](http://tiny.cc/fdkf7y))

Leave the venue taking a left and walk south to Dam square. At Dam square, go right and walk in between the Palace and the Church to the Nieuwezijds Voorburgwal. There is a tram stop there, where you can either take tram 2 or 12 – they take the same route up until its 7th stop, Van Baerlestraat, where you exit. The tram will just have passed the Van Gogh museum (it is on the left side seen from the tram), so you have to walk back a bit and cross the street.

You can of course also try to take a taxi or Uber, but taxi drivers will not be enthusiastically accepting such short trips; doing so will also not be much faster than the other options (or even slower, when stuck in a traffic jam) and quite expensive. Using a car is only recommended if walking is impossible for you. If you just want to minimize walking distance, the third option above (tram 12 or 2) involves least walking.

## We help people see and understand data.

"A system that allows users to create stunning graphs interactively and easily from large multidimensional datasets."

– Jim Gray, Turing Award winner, about Tableau

### A Home for Innovation: From VizQL to Hyper

VizQL is a visual query language that is the foundation of Tableau's query generation. It can speak to all major database systems as well as Tableau's blazingly fast data engine Hyper.

### Tableau Acquires Hyper

In March 2016, Tableau acquired Hyper, a high-performance database system that started as a research project at Technical University Munich and later spun out into a startup.

Key technical personnel that pioneered code generation for main-memory database systems and achieved breakthroughs in query optimization and hybrid transactional and analytical processing continues to innovate from Tableau's offices in Seattle, Palo Alto, and our European research and development center in Munich.

### We're Hiring!

Calling all technical talent – our Engineering team is hiring Software Engineers on both Development and Test teams as well as Research Engineers.
