

43rd International Conference on
VLDB Very Large
Data Bases

28 August – 1 September 2017 · Munich, Germany

www.vldb.org/2017

Welcome Message

VLDB is a premier annual international forum for data management and database researchers, vendors, practitioners, application developers, and users. The annual conference consists of a mix of research talks, tutorials, demonstrations, and workshops. Its topical coverage includes current issues in data management, database, and information systems research. Data management and databases remain among the main technological cornerstones of the applications of the twenty-first century. With the emergence of Big Data, data-related technologies are becoming more important than ever before. VLDB 2017 is taking place at the Technical University of Munich (TUM), one of Europe's top universities. It is committed to excellence in research and teaching, interdisciplinary education and the active promotion of promising young scientists. The university also forges strong links with companies and scientific institutions across the world. TUM was one of the first universities in Germany to be named a University of Excellence. Moreover, TUM regularly ranks among the best European universities in international rankings. The VLDB conference takes place at TUM's (original) downtown campus whereas most natural science and technical faculties, such as mechanical engineering, computer science, mathematics, chemistry, and physics are located at the modern Garching campus, about 15 km north of Munich. The VLDB 2017 conference is held as part of TUM's 50 year anniversary of establishing Computer Science as a scientific discipline in Munich. Since TUM was founded in 1868 (almost 150 years ago) it contributed significantly to the conversion of Bavaria from an agricultural to a highly industrialized region and also to the overall technological progress.

VLDB 2017 received almost 750 research paper submissions, of which 133 have been accepted for presentation at the conference. The conference program also includes 8 "roll-over" papers from VLDB 2016, for a total of 141 research papers. The full conference

program also includes 20 papers from the industrial track, 35 research demonstrations, 8 tutorials, and a panel on cross-disciplinary research. Each day of the conference also features a plenary keynote presentation. The main conference is flanked by a variety of workshops on topics of particular interest to the community.

The VLDB 2017 technical program reflects the efforts of hundreds of members of the research community who have prepared papers, demonstrations and presentations for the conference. It is also the result of more than a year of work by the conference officers and the PVLDB Review Board. We're looking forward to an outstanding program, and we hope that you enjoy it!

Social Events

Both social events are close by the central place in Munich (Marienplatz). You can either walk there as shown on the map (2.5 km, about 30 min), or take public transport.

Public transport options:

- bus 100 (leaves from Gabelsbergerstraße, south entrance of TUM, direction Ostbahnhof) to Odeonsplatz. There, switch to the subway U3 or U6 towards Marienplatz (1 stop).
- live routing: <https://goo.gl/1T1Sg6>

The **Old Town Hall** is next to the Marienplatz, 50m to the east. It is a white building (<https://goo.gl/XE20UV>), not to be confused with the large, red New Town Hall immediately next to the Marienplatz.

The **Hofbräuhaus** (<https://goo.gl/SUUQvW>) is a few minutes east and north of the Marienplatz, as shown on the map. Turn left behind the Old Town Hall into Sparkassenstraße, right into Münzstraße, and left into Platzl.

WLAN

Preferably, just use the *EDUROAM* network if you have eduroam access. Otherwise, follow the instructions below:

TERADATA

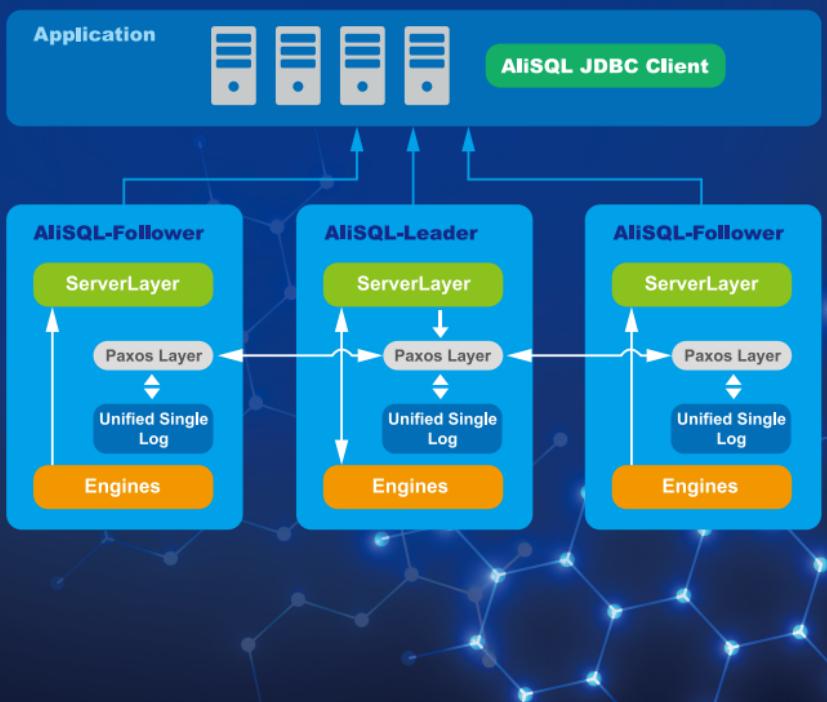

Alibaba Cloud ApsaraDB

ApsaraDB is a Database-as-a-Service platform provided by Alibaba Cloud.

It covers the mainstream database engines including the most popular open-source databases like MySQL (AliSQL), PostgreSQL and Redis, as well as commercial databases like SQL Server and PPAS. It also provides the hybrid analysis database HybridDB and off-line analysis database E-MapReduce, which are compatible with MySQL and PostgreSQL protocols.

AliSQL

AliSQL is a MySQL branch maintained by Alibaba Database team, which supports all lines of business within Alibaba group including Alibaba Cloud, Taobao, Tmall and Ant Financial. We introduced lots of features to AliSQL to support dramatic business growth. Besides providing a fantastic shopping experience in Taobao/Tmall double 11 festival, AliSQL also has more than 100, 000 running RDS instances and 50, 000 users in the cloud. To maximize the outcome we can get from MySQL, we also implemented a high performance Paxos protocol. With the help of Paxos, we can deploy our AliSQL Cluster geo-distributed. Our vision is quite clear that we want to introduce the world the fastest OLTP database at the lowest cost.
